This first one is probably a *really* dumb question, but I can't seem
to find it. The others hopefully aren't so dumb...

I FTP'ed the meteor scatter program that was recently discussed. The
setup requires entering the locator grid square (2+2+2). How do I find
mine? Is there a map somewhere, a chart, what?

Also, I've gotten stuck trying to exit the parameter setup program,
"par". How do you get out? Same question for the main program.

Finally, included with the software was a freebie text editor, "ted".
There was no documentation for it and no apparent on-line help. Other
than the 10 function keys, none of which are for help, I have no idea
what the other commands are nor where to find them. Is there a help
screen or other on-line help? Any ideas?

What are the specific rules about such transmissions ? Which of
the following would be disallowed:

1. Reading Newsgroups via packet from a commercial machine
connected to the Internet.
2. Sending email to ham subscribers
3. Sending email to non-hams on the Internet.

Or is the legality of the transmission dependent on what you send/receive
rather than who you send/receive to (as in voice) ?
